# What's New at netPark?

We have many exciting things going on at netPark!
Our new MVS app is just about ready**!  Read on to find out more.**

Big news from netPark!
The new Mobile Valet Service (MVS) 2.0 is coming very soon! The enhancements that were made will take your mobile valet service to the next level with our industry-leading software.  We have completely redesigned the MVS app from the ground up, to provide a better user experience and provide enhanced functionality at the tap of the screen.  We have added a host of great new features including enhanced camera scanning, built in key tracking and many additional capabilities.  Many of these improvements are a direct result of feedback that we have gathered from our clients.

Some additional features include:

- Redesigned customer information collection screen - Only collect the information you care about
- Improved camera scanning and implementation throughout the app
- New License Plate Decoding - Use the camera to scan and decode license plates for quick entering
- Increased administrative controls and capabilities
- Key Tracking feature has been fully implemented into the MVS app, allowing your location to manage your keys entirely from the MVS device
- New Payment Hardware available
- Increased stability and functionality while utilizing a slow network connection
- netPark Pay Compatible

If you are interested in learning more or becoming a BETA tester for the new MVS app, click below to get started!
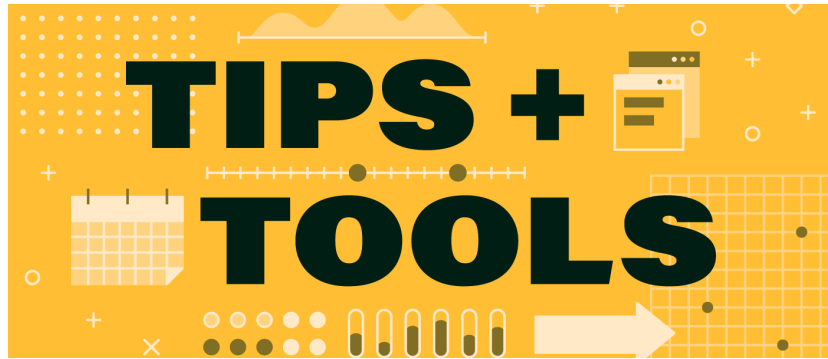

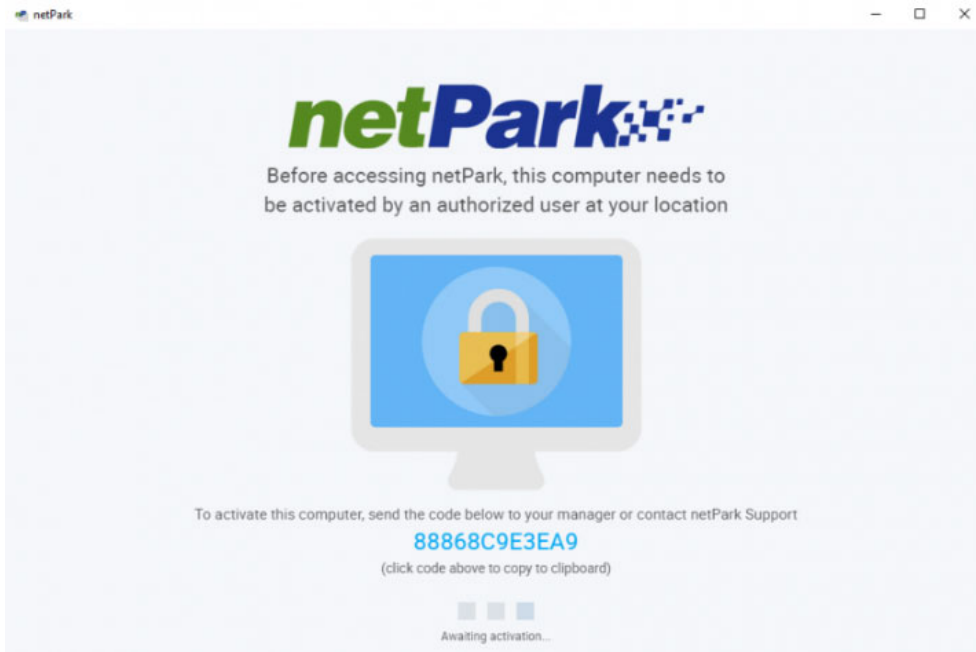

## HELPFUL SUPPORT TIPS

Have you downloaded the new desktop application and received an activation code? Here is a great way to add your device without having to contact netPark support.

1) Have your manager or someone that has access to netPark log in on their own computer.
2) Once logged into the netPark application, click on **Maintenance** from the list of options on the left hand side of the screen.
3) One of the first tabs on the Maintenance screen will say **Access & API** or **Access & Integrations**.  Click on this tab.
4) Once on this screen on the far right hand side is a button called **Add Device**.
5) There is a dropdown menu labeled **Application Type**, they will want to choose **Desktop Application**.
6) The next field is labeled **Friendly Description** and this is where a name is given to the device. For example, we use the first name and then an underscore and then desktop, such as Mike_Desktop)
7) The field labeled **UUID** is where the Activation code needs to be entered, and from there just click save.
8) Once the device has been added, close out of netPark on the new user's device and reopen the netPark application. Once it is restarted the new user should be presented with the login screen.
